### Overview

Initiated by the European Society for Photobiology, this series provides comprehensive overviews on specific areas of photoscience, giving in-depth coverage of the very different fields related to light effects. It embraces both well-established and emerging fields and provides investigators, physicians, industrialists and postgraduate students with an updated account in specific areas of photochemistry and photobiology, plus ready access to the recent literature. Importantly, books in this series provide a critical evaluation of the directions that the field is taking.

## Books from the Royal Society of Chemistry

---

The Royal Society of Chemistry is the world's leading chemistry community, advancing excellence in the chemical sciences. A not-for-profit organisation with 170 years of history, we promote, support and celebrate chemistry and work to shape the future of the chemical sciences – for the benefit of science and humanity.

Book publication is a key part of our work to invest in the chemical sciences. Now approaching 1,500 titles, our collection features titles from authors around the globe and spans 48 years of research, supporting our international vision for the future.

As with all of our published material, our books portfolio is high quality and wide-ranging, covering professional reference books, specialist reports, textbooks and popular science titles.

Our series are similarly comprehensive. Enthusiastically led by an editorial board of high calibre, every new proposal is peer-reviewed by two independent experts.
